sgapiIsAnswered(%%questionID)

This function returns Boolean true if the given question has been answered.

Examples

In this example, we return whether question ID 2 is answered.

```
%%output .= sgapiIsAnswered(2)
```

Output would be 1 if answered and null if unanswered.

In this example, we use sgapiIsAnswered to determine if the indicated question ID is answered and then, using sgapiSubmitSurveyComplete, we mark the survey as complete.

```
if (sgapiIsAnswered(2)) sgapiSubmitSurveyComplete();
```
