sgapiURLValue(%%urlname)

Last Modified on 08/06/2014 1:22 pm EDT

This function returns the value of a query string variable passed into the survey where %%urlname is the name of the url variable.

Note: URL variable names are stored as all lower case in our system.

Example

This script outputs the value of the URL variable "customerid."

```
%%value = sgapiURLValue("customerid");
%%output .= %%value;
```
