

# sgapiAddContactToInvite(%%linkID, %%email, %%fields, %%customfields, %dup sok)

Last Modified on 12/03/2015 12:23 pm EST

---

This function adds a contact with the list of given fields to the given invite.

- **%%linkID\*** is the Invite ID of your email campaign
- **%%email\*** is the email address of the contact you'd like to add
- **%%fields** is an array of the contact fields you'd like to update
- **%%customfields** is an array of the custom invite fields you'd like to update
- **%%dup sok** allows duplicate email addresses to be added to the invite (defaults to 'false' if not included). Note that you should use a string interpretation of the boolean. 'False' will work but false will not.

%%field or %%customfield parameter	Invite Contact Field
sFirstName	First Name
sLastName	Last Name
sOrganization	Organization
sDivision	Division
sDepartment	Department
sTeam	Team
sGroup	Group
sRole	Role
sHomePhone	Phone (Home)
sFaxPhone	Phone (Fax)
sBusinessPhone	Phone (Work)
sMailingAddress	Address
sMailingAddress2	Suite/Apt
sMailingAddressCity	City
sMailingAddressState	Region

sMailingAddressPostal	Postal Code
sMailingAddressCountry	Country
sTitle	Job Title
sURL	Website
sCustom1-10	Invite Custom Field 1-10

*Parameters are case sensitive and are defined as an array where the key is the field name.*

---

## Example

This function is great if you're collecting contact information in one survey, but want to set up an email campaign with that new contact information in another. It allows you to gather all your information and automatically set up a follow up survey email campaign, so you could easily send follow up surveys!

In this example we'll add a contact to the email campaign with ID 123456. linkID is the inviteID and can be found in your email campaign. The contact information will come from fields in the survey. Question IDs 2-5 will contain the email address, first name, last name, and organization respectively.

```
%%linkID = 123456;
%%emailaddress = sgapiGetValue(2);
%%field = array();
%%field['sFirstName'] = sgapiGetValue(3);
%%field['sLastName'] = sgapiGetValue(4);
%%field['sOrganization'] = sgapiGetValue(5);

sgapiAddContactToInvite(%%linkID, %%emailaddress, %%field);
```
