

sgapiArrayMerge(%%array1,%%array2)

Last Modified on 01/30/2015 4:31 pm EST

This is equivalent to the [array_merge](#) function in PHP. Given two arrays this function will append the elements of %%array2 to the end of %%array1 and return combined elements (the array is reindexed).

To see an example or learn more other PHP functions and PHP programming, visit [PHP Documentation](#).
