

# sgapiSetFontPDF(%%pdf, %%font, %%style)

This function sets the font and style of the given pdf (%%font is "Helvetica" and %%style is "Null" by default).

%%font options	%%style options
'adobearabic'	'BoldItalic','Italic','Bold'
'adobehebrew'	'BoldItalic','Italic','Bold'
'adobesongstd'	'BoldItalic','Italic','Bold'
'adobethai'	'BoldItalic','Italic','Bold'
'courier'	'BoldOblique','Oblique','Bold'
'minionPro'	'BoldIt','It','Bold'
'myriadpro'	'BoldIt','It','Bold'
'helvetica'	'BoldOblique','Oblique','Bold'
'adobearabic'	'BoldItalic','Italic','Bold'

## Example

The below script creates and builds a PDF object, outputs it and adds it as an attachment to a send email action. In the highlighted portion of the script we define the font to apply to the PDF.

Check it out in an [example survey](#)

OR

Download a [survey](#) with these scripting functions to your account

```
%%pdf = "Example PDF";
%%text = "Text to include in PDF";
%%size = 14;
%%options = array('spacing' => 1.5);
%%table = array( array(1,2,3,4), array(5,6,7,8), array (9,10,11,12)
);
%%columns = array('Column A','Column B','Column C','Column D');

sgapiNewPDF(%%pdf,'letter','portrait');
sgapiSetFontPDF(%%pdf,'courier');
sgapiSetColorPDF(%%pdf,0,0,0);
sgapiImagePDF(%%pdf,"https://surveygizmolibrary.s3.amazonaws.com/li
rary/160589/surveysoftwareapi.png");
sgapiTextPDF(%%pdf,%%text,%%size,%%options);
sgapiTablePDF(%%pdf,%%table,%%columns,'Table Title');

%%formattedpdf = sgapiPDFOutput(%%pdf);

%%attachment['example.pdf'] = %%formattedpdf;

//Attach to existing send email action (ID 3)
sgapiSetQuestionProperty(3,"email_attachments",%%attachment);
```
