

sgapiPDFOutput(%%pdf)

This function returns the output of your pdf.

For more info on PHP PDF Creation visit:<https://github.com/rospdf/pdf-php/blob/master/readme.pdf>

Example

The below script creates and builds a PDF object, outputs it and adds it as an attachment to a send email action. In the highlighted portion of the script we output the formatted PDF.

Check it out in an [example survey](#)

OR

[Download a survey](#) with these scripting functions to your account

```
%%pdf = "Example PDF";
%%text = "Text to include in PDF";
%%size = 14;
%%options = array('spacing' => 1.5);
%%table = array( array(1,2,3,4), array(5,6,7,8), array (9,10,11,12)
);
%%columns = array('Column A','Column B','Column C','Column D');

sgapiNewPDF(%%pdf, 'letter', 'portrait');
sgapiSetFontPDF(%%pdf, 'courier');
sgapiSetColorPDF(%%pdf, 0, 0, 0);
sgapiImagePDF(%%pdf, "https://surveygizmolibrary.s3.amazonaws.com/library/160589/surveysoftwareapi.png");
sgapiTextPDF(%%pdf, %%text, %%size, %%options);
sgapiTablePDF(%%pdf, %%table, %%columns, 'Table Title');

%%formattedpdf = sgapiPDFOutput(%%pdf);

%%attachment['example.pdf'] = %%formattedpdf;

//Attach to existing send email action (ID 3)
sgapiSetQuestionProperty(3, "email_attachments", %%attachment);
```
