API Functions

These functions allow you to make some common API calls to the SurveyResponse object.

sgapiList - This function returns the list of responses for the given survey. This is equivalent to a get list on the SurveyResponse object via the RestAPI.

sgapiListAdd - This function posts a response to the given survey using the array of items. This is equivalent to creating a SurveyResponse object via the RestAPI.

sgapiListRemove - This function removes the given response from the given survey. This is equivalent to deleting a SurveyResponse object via the RestAPI.

sgaiListReplace - This function replaces the given response for the given survey with the array items. This is equivalent to updating a SurveyResponse object via the RestAPI.
