sgapiGetQuestionRuntimeProperty(%%questionID,%%property)

This question returns the specified runtime property for the given question ID.

Possible Properties	Return Values
Hidden	boolean
Required	boolean
Soft-Required	boolean
Disabled	boolean
Rendered	boolean
Answered	boolean
Answered (text fields)	boolean
Number (Question number)	question number e.g. 1.
Comment	This pulls the objects that include the raw data from **Comment Fields**

Example

In this example we use the runtime property "Number," which returns the question number assigned to the question by ID at runtime. Then we concatenate these values to store the unique random order of the questions for this response. Finally, we set the value of a textbox equal to this random order to store for later reporting.

Check it out in an Example Survey

```
%%property = "Number";

%%q1 = sgapiGetQuestionRunTimeProperty(2,%%property);
%%q2 = sgapiGetQuestionRunTimeProperty(3,%%property);
%%q3 = sgapiGetQuestionRunTimeProperty(4,%%property);

%%randomorder = %%q1 . %%q2 . %%q3;

sgapiSetValue(8,%%randomorder);
```
