

# sgapiRenderQuestionHTML(%%question)

Last Modified on 08/06/2014 1:22 pm EDT

This function renders the entire question including all the HTML associated with both the question title, description and answer options.

## Example

In the below example we output the results of sgapiRenderQuestionHTML for the below question:

### 1. Which of these is your favorite pirate phrase?

[Click to review definitions of terms.](#)

- Shiver me timbers! ?
- Splice the mainbrace ?
- Fair winds! ?
- Kiss the gunner's daughter! ?
- Avast, me hearties! ?
- Aye Aye ?

```
%%output .= sgapiRenderQuestionHTML(2);
```

The output will be to render the entire question including all HTML as pictured below.

### 1. Which of these is your favorite pirate phrase?

[Click to review definitions of terms.](#)

- Shiver me timbers! ?
- Splice the mainbrace ?
- Fair winds! ?
- Kiss the gunner's daughter! ?
