

## sgapiARSort(%%array, %%flag)

*Last Modified on 01/30/2015 4:31 pm EST*

This is equivalent to the [arsort](#) function in PHP. This function sorts an array in reverse order and maintains index association. Elements will be arranged in reverse order when this function has completed.

The %%flag parameter defaults to "SORT\_REGULAR". See the PHP documentation to learn more about %%flag options.

*To see an example or learn more other PHP functions and PHP programming, visit [PHP Documentation](#).*
