

sgapiRSort(%%array, %%flag)

Last Modified on 01/30/2015 4:31 pm EST

This is equivalent to the [rsort](#) function in PHP. This function sorts an array in reverse order (highest to lowest), and then reindexes it. This means the keys are now numerical.

The %%flag parameter defaults to "SORT_REGULAR". See the PHP documentation to learn more about %%flag options.

To see an example or learn more other PHP functions and PHP programming, visit [PHP Documentation](#).
