

sgapiTranslate(%%string,%%language)

Last Modified on 09/06/2016 1:02 p m EDT

This function translates a string in custom scripting to the current language of the survey (or a language specified as the optional second parameter).

The sgapiT ranslate function creates a translation field for the specified string in the [Text & Translation](#) interface for each language version of your survey. The field can be used to translate the string.

The screenshot displays the 'Text & Translations' interface for the English version of a survey. The interface is divided into two main sections: a table of fields and a 'Translate' panel.

Table of Fields:

Field	Default Text
Project Title	sgapiTranslate Script
Page 1	(untitled)
Question: 1 Radio Buttons	just a random question
Action Custom Script	New Custom Script
Page 2	Thank You!
Decorative Text / Instructions	Thank you for taking our survey. Your response is appreciated.
Action Send Email	Confirmation Email
Action Send Email	Confirmation Email

Translate Panel:

Action Title:
New Custom Script

Default Text: New Custom Script

Text: This text is in English
This text is in English

Buttons: Never Mind, Save

Example

The below script outputs the string wrapped in quotes to the survey page. If the string has been translated into multiple language versions in the survey, the translated version will be presented should the survey be viewed in one of the translated languages.

```
%%output .= sgapiTranslate("This is sample text");
```
